

# Cloud Video Management System Integration

IDCUBE, provider of the world's first AI-powered physical access control solutions, has collaborated with Eagle Eye Networks, the leader in cloud video management software. This partnership delivers an integrated physical security application platform that eliminates the need for on-site computers or servers. The result is a seamless, truly cloud-based solution, enabling single-window monitoring, rapid incident response, and investigations.

# Features

**True Cloud-based Integration:** IDCUBE Access360.ai and EagleEye VMS are both cloud-based platforms that integrate and multiply the benefits of the cloud.

**Camera mapping with Doors & IO Points:** Cameras from VMS and doors & IO points from Access control integrate together, having events and alarms mapped with corresponding videos.

**Live view in Access Control:** The integration allows users to view live video of any camera from within the access control interface.

**Stored Video playback:** Single window in access control to Play a video from a predefined camera against time and area of access doors, Intrusion Zones, and IO Points.

**GUI:** Graphical User Interface (floor maps): pick and drop the camera to create the GUI that supports live view.

# Benefits

**Streamlined Operations:** A single window interface for managing an organization's entire physical security operations, reducing time spent on managing systems via standalone applications.

**Swift Investigation:** View live alarms from the access control & intrusion detection system and their mapped video streams for precise situational understanding and Investigation.

**Instant Response:** Administrators may easily lock, unlock, or choose to lock down the facility or a particular floor while viewing the camera clips through the same window.

**User Directory:** Access the user directory with a single click to identify users in the alarm-mapped video clips easily.

**Enhanced Perimeter Security:** Cameras linked to perimeter intrusion sensors are automatically highlighted for quick investigation & subsequent counteractive actions.

**Cost-efficient:** IDCUBE Access360.ai and Eagle Eye Cloud VMS present the best-of-the-breed integrations of two cloud platforms, saving costs on servers and workstations and corresponding electricity, air conditioning, and maintenance.

**Auto Upgradation:** Both platform's subscription models receive automatic upgrades, enabling the customer to use the latest features and maintain a high security posture.
